EDUCATION

Bachelor of Technology in Computer Science
Dr. A.P.J. Abdul Kalam Technical University
(2024 - 2028)
Lucknow, Uttar Pradesh

Class XII
J.P. Intermediate College (Captainganj, Kushinagar)
Kushinagar, Uttar Pradesh

TECHNICAL SKILLS

Languages
Python, Java, SQL, HTML, CSS

AI / Machine Learning
Machine Learning, Deep Learning, PyTorch, Scikit-learn

Data & Analytics
Pandas, NumPy, Matplotlib

Tools & Platforms
Git, GitHub, Jupyter Notebook, VS Code

Currently Learning
LLMs, Transformers, Generative AI

CORE STRENGTHS

- Data manipulation and exploratory data analysis
- Analytical and problem-solving skills
- E-learning and self-directed skill development
- Clear communication and collaborative teamwork

PROFESSIONAL SUMMARY

Aspiring Data Scientist and Machine Learning enthusiast with hands-on experience building end-to-end ML projects and a strong foundation in Python, PyTorch, and Scikit-learn. Passionate about solving real-world problems using data, deep learning, and modern AI techniques. Skilled in full-stack development, data analysis, and model deployment, with a keen interest in leveraging AI to create impactful solutions.

PROJECTS

1. **Heart Diseases Predictor** — Python / ML / Flask
   Built a machine learning model to predict the risk of heart disease using medical attributes like age, cholesterol, blood pressure, etc. Implemented data preprocessing, feature engineering and model evaluation using Scikit-learn.

2. **Plant Diseases Detection** — Python / CNN / Tensorflow
   Developed a deep learning model to detect plant diseases from leaf images using CNN. Preprocessed images, trained on a custom dataset and achieved high accuracy in classification.

3. **Emotion App** — Python / Deep Learning / Streamlit
   Built a web app to detect emotions from facial expressions using a CNN model. Takes real-time input from webcam and classifies emotions like happy, sad, angry, etc., with a simple and interactive UI.

4. **Snake RL using Reinforcement Learning** — Python / RL / Pygame
   Implemented the Classic Snake game environment and trained an agent using Reinforcement Learning (Q-learning) to learn optimal actions and maximize the score.

5. **Text Summarizer** — Python / NLP / Transformers
   Built a text summarization tool using transformers to generate concise summaries from long articles and documents. Implemented using Hugging Face and evaluated with ROUGE scores.

6. **Zepto Support Assistant** — Python / GenAI / RAG / LangChain
   Developed a GenAI + RAG based support assistant for Zepto. Used LangGraph for intent classification and retrieval/LLM pipeline with ChromaDB for policy queries. General queries are handled directly by the LLM.

7. **Anomalous User Detection** — Python / XGBoost / Scikit-learn / Streamlit / Flask
   Developed an ML-powered cybersecurity system to identify suspicious user activity and potential network attacks from session data. Trained an XGBoost classifier and built interactive interfaces for attack-risk predictions.

TOOLS & TECHNOLOGIES

Python | PyTorch | Scikit-learn | Pandas
NumPy | Matplotlib | Jupyter | Git
GitHub | VS Code | Streamlit | Hugging Face
